ERP-V2

ENTERPRISE RESOURCE PLANNING SYSTEM

Full Application Quality Assurance Test Plan

A comprehensive manual QA test plan covering all 18 functional modules, 150+ test scenarios, real-time features, edge cases, and cross-cutting concerns for the ERP-V2 platform.

TOTAL SCENARIOS	MODULES	CRITICAL FLOWS	EDGE CASES

4
USER ROLES

Application: ERP-V2 — Multi-branch Enterprise Resource Planning System
Scope: Full manual QA coverage across all functional modules including POS, Call Center, Bulk B2B, Financial, HR, Inventory, Production, and real-time SSE features.
Environment: Local development + staging. Test with at least 2 browser sessions open simultaneously for SSE/notification testing.
Pre-requisites: Clean database with at least 1 branch, 1 warehouse, 1 treasury, and 1 admin user seeded before starting.

CRITICAL — Test First | HIGH — Before Release | MEDIUM — Full Coverage | LOW — Nice to Verify

Priority Order for Testing

1. **Module 6 — POS** (money movement, shift, inventory)
2. **Module 7 — Call Center + SSE** (real-time notifications, order flow)
3. **Module 10 — Treasuries** (financial integrity)
4. **Module 8 — Bulk B2B** (complex order + payment lifecycle)
5. **Module 9 — Purchases** (inventory receipt, supplier debt)
6. **Modules 1–5** (auth, setup, master data)
7. **Modules 11–18** (delivery, HR, production, reports)

Test Accounts Required

#	ROLE	PERMISSIONS NEEDED	PURPOSE
A	**Superadmin**	Full system access	User/role management, audit logs
B	**Branch Manager**	POS, Shifts, Sales, Treasuries, Inventory, Reports	Shift approval, transfers
C	**Cashier**	POS, Shifts only	Main POS testing, notification testing
D	**Call Center Agent**	CALL_CENTER module	Creating CC orders
E	**Bulk Sales Agent**	BULK_POS, BULK_CUSTOMERS, BULK_PRICING, BULK_CREDIT	B2B order flow

1 Authentication & Access Control

Login, session management, permissions, and branch isolation

#	SCENARIO	STEPS	EXPECTED RESULT
1.1	**Valid login**	Enter correct username + password → Submit	Redirected to dashboard; user name shown in header
1.2	**Wrong password**	Enter wrong password → Submit	Error message shown; no redirect
1.3	**Inactive user login**	Login as a deactivated user account	Blocked with "account inactive" error message
1.4	**Permission-blocked route**	Log in as cashier → navigate to /hr manually	Redirected to /forbidden page
1.5	**Session persistence**	Login → close tab → reopen same URL	Still logged in; no re-login required
1.6	**Logout**	Click logout button	Redirected to login page; token cleared from storage
1.7	**Branch isolation**	Log in as Branch-A cashier → try to access Branch-B sales	Only Branch-A data visible in all lists
1.8	**Multi-branch access**	Log in as area manager with 2 branches assigned	Both branches appear in branch selector dropdowns

2 Superadmin Panel

User management, roles, permissions, and audit logs

#	SCENARIO	STEPS	EXPECTED RESULT
2.1	**Create new user**	Superadmin → Users → Create user with role + branch	User appears in list; can log in successfully
2.2	**Assign new role to user**	Edit user → assign a different role	User's accessible modules change on next login
2.3	**Deactivate user**	Toggle user status to inactive	User cannot log in; receives inactive error
2.4	**Reset user password**	Superadmin → Reset password for user	User can log in with new password
2.5	**Create new role**	Roles → Create role with POS + SHIFTS only	Role appears; user assigned it sees only those modules
2.6	**Delete role in use**	Try to delete a role currently assigned to a user	Blocked with descriptive error message
2.7	**Audit log entry**	Perform any mutation → check /audit log	Action recorded with user, timestamp, old + new values
2.8	**Audit log filter**	Filter audit log by entity type or username	Only matching entries shown

3 Branch & Warehouse Setup

Creating and managing branches, warehouses, and treasuries

#	SCENARIO	STEPS	EXPECTED RESULT
3.1	**Create branch**	Branches → Create with name + address	Branch appears in all branch selection dropdowns
3.2	**Create warehouse**	Warehouses → Create, link to branch	Warehouse available in inventory and transfer forms
3.3	**Create treasury**	Treasuries → Create (BRANCH_CASH scope) linked to branch	Treasury appears with £0 balance
3.4	**Edit branch name**	Branches → Edit → Change name → Save	Updated everywhere the branch appears in UI
3.5	**Deactivate branch**	Toggle branch to inactive	Branch hidden from active selections; existing data preserved
3.6	**Branch balance summary**	Branch Balances → Select date range	Each branch shows correct treasury totals for that period

4 Master Data — Items, Categories, Clients, Suppliers

Core entity creation and validation

#	SCENARIO	STEPS	EXPECTED RESULT
4.1	**Create category**	Categories → Create with name + POS display flag enabled	Appears in item creation form's category dropdown
4.2	**Create item**	Items → Create with sell price, cost price, reorder point, category	Item appears in POS and purchase forms
4.3	**Toggle POS visibility off**	Edit item → disable POS visibility flag	Item no longer shows in POS item list
4.4	**Create client**	Clients → Create with phone + full name	Client searchable in POS and call center by phone number
4.5	**Duplicate phone validation**	Create a second client with same phone number	Validation error or auto-match to existing client
4.6	**Create supplier**	Suppliers → Create with contact info	Supplier available in purchase creation form
4.7	**Delete item with history**	Try to delete an item that has existing sales	Blocked with clear error message
4.8	**Reorder alert trigger**	Set item quantity below its configured reorder point	Item flagged/highlighted in inventory stats page

5 Inventory Management

Stock levels, initial inventory, and stock transfers

#	SCENARIO	STEPS	EXPECTED RESULT
5.1	**Set initial inventory**	Initial Inventory → Select warehouse + item → set opening qty	Inventory page shows correct quantity for that warehouse
5.2	**View stock levels**	Inventory → Filter by warehouse	Correct quantities per item displayed
5.3	**Create stock transfer**	Stock Transfers → Create (source → destination, qty)	Transfer created with status PENDING; source qty unchanged yet
5.4	**Approve stock transfer**	Open PENDING transfer → Approve	Source qty decreases; destination qty increases by transferred amount
5.5	**Cancel stock transfer**	Cancel a PENDING transfer	Quantities remain unchanged; transfer status = CANCELLED
5.6	**Inventory after POS sale**	Complete POS sale of item X (qty 3)	Item X inventory decreases by 3 in that branch's warehouse
5.7	**Inventory after purchase**	Receive purchase of item Y (qty 10)	Item Y inventory increases by 10 in target warehouse

#	SCENARIO	STEPS	EXPECTED RESULT
5.8	**Inventory after production**	Complete production order using item Z as input (qty 5)	Item Z decreases by 5; output item increases by produced qty

6 Point of Sale (POS)

Sales, payments, discounts, delivery, shifts — HIGHEST PRIORITY MODULE

> **Note:** POS is the highest-risk module. Money movement + inventory + treasury all happen atomically. A rollback bug here means phantom money or ghost inventory. Test this module first and most thoroughly.

#	SCENARIO	STEPS	EXPECTED RESULT
6.1	**Start shift**	POS → Start shift → enter opening cash amount → Confirm	Shift created; POS interface fully unlocked
6.2	**Basic sale — cash payment**	Add items to cart → Pay with Cash → Confirm	Sale created; inventory decreases; BRANCH_CASH treasury + amount
6.3	**Basic sale — Visa payment**	Add items → Pay with Visa	Sale created; GLOBAL_VISA treasury + amount
6.4	**Basic sale — Instapay payment**	Add items → Pay with Instapay	Sale created; GLOBAL_INSTAPAY treasury + amount
6.5	**Split payment**	Pay partial cash + partial Visa (e.g. £100 cash + £50 Visa)	Both treasuries receive correct split amounts
6.6	**Apply standard discount**	Add items → Apply discount code → Confirm sale	Discounted total saved correctly; discount reason recorded on sale
6.7	**Sensitive discount — manager auth**	Apply large/sensitive discount → manager override dialog appears → enter manager credentials	Discount applied on success; rejected on wrong credentials

#	SCENARIO	STEPS	EXPECTED RESULT
6.8	**Sale with delivery assignment**	Complete sale → assign delivery man + zone + fee	Delivery transaction created; delivery man wallet debt increases by fee
6.9	**Sale linked to client**	Search client by phone → link to sale → Confirm	Client name appears on sale record in sales history
6.10	**Sale return**	Sales History → Find completed sale → Return items	Inventory restored; treasury decreases by refund amount
6.11	**Void sale**	Find sale → Void	Sale status = VOIDED; inventory + treasury fully reversed
6.12	**End shift — balanced**	Count cash matching expected → End shift	Shift shows £0 shortage; status = PENDING_REVIEW
6.13	**End shift — with shortage**	Enter less cash than expected → End shift	Shortage amount recorded accurately on shift record
6.14	**Manager approves shift**	Manager login → Shifts → Approve pending shift	Shift status changes to CLOSED
6.15	**POS receives CC notification**	Open POS (cashier session) → Create CC order from another session	POS bell increments +1; alert sound plays; notification appears in list
6.16	**Cannot sell out-of-stock item**	Try to add item with 0 inventory to cart → Confirm	Validation error or clear warning preventing completion
6.17	**Weight-based item sale**	Add weight-measured item → enter weight in grams	Correct quantity and price calculated based on weight

7 Call Center Module

Order creation, real-time SSE notifications, and order lifecycle

> **Setup:** Open TWO browser sessions — one as Cashier (POS with active shift), one as Call Center Agent. Both must be on the same branch. The SSE stream must be connected (green indicator visible) before creating orders.

#	SCENARIO	STEPS	EXPECTED RESULT
7.1	**Create new CC order**	Call Center → New Order → select branch, search client, add items → Confirm	Order created (status: NEW); real-time event sent to all branch cashiers
7.2	**Real-time notification (2 sessions)**	Create CC order → check POS session simultaneously	Bell increments; sound plays; notification shows order number + client
7.3	**Cashier marks PREPARING**	POS → Orders queue → click order → Mark PREPARING	Status → PREPARING; CC agent and other cashiers notified
7.4	**Mark order READY**	PREPARING order → Mark READY	Status → READY; relevant users notified
7.5	**Assign delivery to CC order**	READY order → assign delivery man + zone	Delivery fields saved on order
7.6	**Mark OUT FOR DELIVERY**	READY order with delivery → Mark Out for Delivery	Status → OUT_FOR_DELIVERY
7.7	**Mark DELIVERED**	OUT_FOR_DELIVERY order → Mark Delivered	Status → DELIVERED; order complete
7.8	**Cancel CC order**	NEW/PREPARING order → Cancel → enter reason	Status → CANCELLED;

#	SCENARIO	STEPS	EXPECTED RESULT
			inventory restored; reason saved
7.9	**Create client inline in CC order**	Order form → phone not found → Create new client → complete order	Client saved to database; order linked to new client
7.10	**Call Center report**	Reports → Call Center Report → select date range	Order counts, revenue totals, and status breakdown displayed
7.11	**SSE reconnect replay**	Open POS → disconnect network for ~35 seconds → reconnect	Auto-reconnects; missed notifications appear via Last-Event-ID replay

8 Bulk / B2B Orders

Wholesale customer management, quotes, invoices, and payments

#	SCENARIO	STEPS	EXPECTED RESULT
8.1	**Create bulk customer**	Bulk → Customers → Create with company name, tax number, credit limit	Customer appears in bulk customer list
8.2	**Set contract price**	Customer detail → Add contract price for a specific item	Price stored; used automatically in Bulk POS for this customer
8.3	**Add multiple contacts**	Customer detail → Add 2+ contacts	All contacts visible and saved on customer record
8.4	**Create bulk order (DRAFT)**	Bulk POS → Select customer → Add items → Save as draft	Order created with status DRAFT
8.5	**Generate proforma invoice**	DRAFT order → Generate Proforma document	Document type = PROFORMA; order status unchanged; document downloadable
8.6	**Confirm order**	DRAFT order → Confirm	Status changes to CONFIRMED; inventory reserved
8.7	**Record cash payment**	CONFIRMED order → Record payment (CASH)	Payment saved; status → PARTIALLY_PAID or PAID
8.8	**Record cheque payment**	Record payment (CHEQUE) with due date	Cheque record with due date saved; can be voided later
8.9	**Record bank transfer payment**	Record payment (BANK_TRANSFER) with bank reference number	Reference number saved on payment record

#	SCENARIO	STEPS	EXPECTED RESULT
8.10	**Partial then full payment**	Pay 50% → verify PARTIALLY_PAID → Pay remaining 50%	Status: CONFIRMED → PARTIALLY_PAID → PAID
8.11	**Generate tax invoice**	PAID order → Generate Tax Invoice document	Document type = TAX_INVOICE; downloadable with correct totals
8.12	**Bulk refund — cash**	Paid order → Refund → CASH_REFUND	Refund created; customer credit/balance updated
8.13	**Bulk refund — credit note**	Paid order → Refund → CREDIT_NOTE	Credit note created; usable as payment on next order
8.14	**Credit limit enforcement**	Create order total exceeding customer credit limit	Validation error or warning displayed; order blocked or flagged
8.15	**Bulk reports**	Bulk Reports → Select date range → View	Revenue, profit margins, and per-customer breakdown shown correctly

9 Purchases & Supplier Accounts

Purchase orders, returns, supplier debt tracking, and payments

#	SCENARIO	STEPS	EXPECTED RESULT
9.1	**Create cash purchase**	Purchases → Create with supplier, items, quantities, CASH payment	Inventory increases; treasury decreases; supplier account updated
9.2	**Create credit purchase**	Purchases → Create with CREDIT payment	Inventory increases; supplier account balance increases (amount owed)
9.3	**Apply purchase discount**	Add discount (%) to purchase line items	Total reduced correctly; discount reflected in purchase record
9.4	**Mixed payment purchase**	Pay partial CASH + partial CREDIT on one purchase	Cash treasury decreases by cash portion; remaining added to supplier debt
9.5	**Purchase return**	Open completed purchase → Return all or partial items	Inventory decreases; supplier account credited by return value
9.6	**Cancel purchase**	Open purchase → Cancel	Status = CANCELLED; inventory and treasury fully reversed
9.7	**Supplier account balance**	After credit purchase → Supplier Accounts → View supplier balance	Balance matches outstanding owed amount exactly
9.8	**Record supplier payment**	Supplier Accounts → Pay supplier → choose treasury	Supplier balance decreases; chosen

#	SCENARIO	STEPS	EXPECTED RESULT
		source	treasury decreases
9.9	**Record old debt**	Supplier Accounts → Add Old Debt entry with amount	Supplier balance increases by old debt amount
9.10	**Purchase history report**	Reports → Purchase History → filter by supplier + date	Only matching purchases for that supplier/period shown

10 Financial Management & Treasuries

Treasury balances, deposits, withdrawals, cash transfers, and expenses

#	SCENARIO	STEPS	EXPECTED RESULT
10.1	**Treasury balance after sale**	Make a cash sale of £200 → check BRANCH_CASH treasury	Treasury balance increases by exactly £200
10.2	**Create deposit**	Deposits → Deposit £500 to treasury with description	Treasury balance + £500; deposit record created with timestamp
10.3	**Create withdrawal**	Withdrawals → Withdraw £100 from treasury	Treasury balance - £100; withdrawal record created
10.4	**Create cash transfer**	Treasuries → Transfers → Transfer from branch cash to main treasury	Transfer created with status PENDING; source balance unchanged yet
10.5	**Approve cash transfer**	Transfer Management → Open pending transfer → Approve	Source treasury -amount; destination treasury +amount
10.6	**Reject cash transfer**	Transfer Management → Open pending transfer → Reject	Both treasuries remain unchanged; transfer status = REJECTED
10.7	**Create expense (cash)**	Expenses → Create expense paid in CASH from treasury	Treasury -amount; expense record created with category and date
10.8	**Create expense (card)**	Expenses → Create expense paid by CARD	Expense recorded correctly against card treasury

#	SCENARIO	STEPS	EXPECTED RESULT
10.9	**Edit expense amount**	Update expense from £100 to £150	Updated amount reflected; treasury balance adjusted accordingly
10.10	**Delete expense**	Delete an expense record	Treasury balance restored; expense removed from list
10.11	**Global treasury summary**	Treasuries → Global Balances page	Correct aggregated totals across all branches shown
10.12	**Transfer history report**	Reports → Cash Transfer History	All transfers listed with amounts, statuses, and dates

11 Delivery Management

Delivery men, zones, assignment, and debt settlement

#	SCENARIO	STEPS	EXPECTED RESULT
11.1	**Create delivery man**	Delivery → Men → Create with name and vehicle type	Delivery man in list with £0 wallet balance
11.2	**Create delivery zone**	Delivery → Zones → Create with fee + driver share %	Zone available in POS delivery assignment modal
11.3	**Assign delivery on sale**	POS sale → Open delivery modal → assign delivery man + zone	Delivery transaction created; wallet debt increases by zone fee
11.4	**Multiple deliveries accumulate debt**	Complete 3 deliveries with same delivery man	Wallet balance = sum of all delivery fees owed
11.5	**Settle full delivery debt**	Delivery Settlement → Select delivery man → Pay full balance	Wallet balance cleared to £0; settlement record created
11.6	**Partial settlement**	Settlement → Pay only part of delivery man's debt	Wallet balance decreases by paid amount only; remainder persists
11.7	**Deactivate delivery man**	Edit delivery man → Deactivate	Delivery man no longer appears in assignment dropdown on POS

12 HR & Payroll

Employee management, advances, deductions, and salary processing

#	SCENARIO	STEPS	EXPECTED RESULT
12.1	**Create employee**	Employees → Create with base salary, position, branch, working days	Employee appears in HR list with correct base salary
12.2	**Record advance payment**	HR → Employee → Add advance transaction (£500)	Advance shown in transaction history; net salary decreases by £500
12.3	**Record deduction**	HR → Employee → Add deduction (e.g. late penalty)	Deduction reflected in net payroll calculation
12.4	**Calculate net salary**	View employee payroll details	Net = base salary − total advances − total deductions (correct math)
12.5	**Process salary payment**	HR → Pay employee → confirm	Status = PAID; payment transaction created; net resets for next period
12.6	**Transaction history**	Employee → View transaction history	All advances, deductions, and salary payments listed chronologically
12.7	**Advance history report**	Reports → Advance History → filter by date	All advances for that period shown with amounts and employee names

13 Shift Management

Opening, closing, and approving cashier shifts

#	SCENARIO	STEPS	EXPECTED RESULT
13.1	**Start MORNING shift**	Shifts → Start MORNING shift with opening cash amount (e.g. £200)	Shift active; POS fully unlocked and operational
13.2	**Cannot start second shift**	Try to start a new shift while one is already active	Blocked with "active shift already exists" error
13.3	**End shift — no shortage**	End shift with cash count exactly matching expected	Shift = PENDING_REVIEW; shortage = £0
13.4	**End shift — with shortage**	Enter cash count lower than expected → End shift	Shortage amount saved accurately on the shift record
13.5	**Manager approves shift**	Manager login → Shifts → Pending shifts → Approve	Shift status = CLOSED; appears in shift history
13.6	**Shift totals accuracy**	Make £500 cash + £200 Visa sales in shift → End shift	Expected cash = opening + £500; expected Visa = £200; values match

14 BOM & Production

Bill of Materials creation and production order execution

#	SCENARIO	STEPS	EXPECTED RESULT
14.1	**Create BOM**	BOM → Create with 3 input items + quantities + 1 output item	BOM saved; visible in production order creation form
14.2	**Create production order**	BOM → Production → Create order (target: 10 units output)	Production order created; awaiting execution
14.3	**Complete production order**	Set actual output qty + waste amount → Complete	Input inventories decrease; output increases; cost calculated correctly
14.4	**Cancel production order**	Cancel a pending production order	Inventory unchanged; order status = CANCELLED
14.5	**Insufficient input stock**	Try to complete production when input items have insufficient inventory	Validation error; production blocked
14.6	**Production history**	BOM → Production History → filter by date range	All completed and cancelled orders shown with correct details

15 Reports & Analytics

All reporting pages and data accuracy verification

#	SCENARIO	STEPS	EXPECTED RESULT
15.1	**General report**	Reports → General → select date range → Load	Aggregated revenue, expenses, and profit shown for that period
15.2	**Detailed report by branch**	Reports → Detailed → filter by specific branch	Item-level sales breakdown for that branch only
15.3	**Daily transactions**	Reports → History → Daily Transactions → pick date	All transactions for that single day listed correctly
15.4	**Sales history filter**	Sales → filter by payment method + specific date range	Only matching sales shown in results
15.5	**Purchase history by supplier**	Reports → Purchase History → filter by supplier	Only that supplier's purchases displayed
15.6	**Stock transfer history**	Reports → Stock Transfer History	All transfers listed with status, warehouse names, and dates
15.7	**Creation history audit**	Reports → Creation History	Audit of all master data entities created — with creator and timestamp
15.8	**Branch balances snapshot**	Branch Balances → select specific date	Each branch shows correct treasury balance snapshot for that date

16 Settings & Configuration

System-wide settings and their effect on application behavior

#	SCENARIO	STEPS	EXPECTED RESULT
16.1	**Update company name**	Settings → Change company name → Save	Name reflected in UI header and any generated documents/receipts
16.2	**Change tax rate**	Settings → Change tax % → Save → Make a POS sale	New sale calculated using updated tax rate (not old rate)
16.3	**Set main warehouse**	Settings → Assign main warehouse → Save	Used as default warehouse in relevant forms and reports
16.4	**Configure Visa treasury**	Settings → Assign GLOBAL_VISA treasury → Save → Make Visa sale	Visa payment routes to newly assigned treasury
16.5	**Set salary period dates**	Settings → Change salary period start/end → Save	Payroll calculations use the new period boundaries

17 Data Import / Export

Bulk import templates and CSV export functionality

#	SCENARIO	STEPS	EXPECTED RESULT
17.1	**Download import template**	Data Import → Items template → Download	CSV downloads with correct column headers matching import spec
17.2	**Bulk import items**	Fill template with 10+ items → Upload CSV	All items created; appear immediately in item list
17.3	**Import with bad data**	Upload CSV with missing required fields (e.g. no price)	Error report shown with specific failed rows; valid rows still imported
17.4	**Bulk import clients**	Fill clients template → Upload	Clients created; searchable in POS by phone
17.5	**Bulk import inventory**	Fill inventory template (item + warehouse + qty) → Upload	Stock levels set for each warehouse/item combination
17.6	**Export items**	Items page → Export to CSV	CSV downloads with all current items and their properties
17.7	**Export sales data**	Sales page → Apply filters → Export	CSV contains only the filtered sales records

18 Cross-Cutting & Edge Cases

Concurrency, browser behavior, UI edge cases, and resilience

> **Note:** These tests verify system behavior under unusual or stressful conditions. Some require careful setup (e.g. concurrent sessions) or specific browser permissions to test correctly.

#	SCENARIO	STEPS	EXPECTED RESULT
18.1	**Concurrent stock depletion**	Two cashier sessions both try to sell the last unit of item X simultaneously	One succeeds; the other receives an out-of-stock error
18.2	**Browser notification permission**	First POS load → Browser asks permission → Allow	CC order notifications delivered as OS-level browser alerts
18.3	**SSE reconnect after network drop**	POS open → Disable network for ~35 seconds → Re-enable	SSE auto-reconnects; all missed events replayed via Last-Event-ID
18.4	**Mark all notifications read**	Open notifications list → Mark All Read	Bell counter resets to 0; all items show as read
18.5	**Long POS session (2+ hours)**	Keep POS open with sales for over 2 hours	No token expiry errors; session remains valid throughout
18.6	**404 page**	Navigate to /nonexistent-route in browser	Friendly 404 page displayed with navigation link home

#	SCENARIO	STEPS	EXPECTED RESULT
18.7	**Forbidden page**	Navigate to a module the current user lacks permission for	Friendly 403/Forbidden page; no partial data leaked
18.8	**Large cart performance**	Add 20+ different items to POS cart	UI stays responsive; totals calculate correctly; no freezes
18.9	**Arabic + special characters**	Create an item with Arabic name and special characters (e.g. &, %, /)	Name saved correctly; displayed correctly in all views
18.10	**Print receipt**	Complete POS sale → Print receipt	Receipt renders with all details: items, totals, tax, cashier, date
18.11	**Date filter — same day**	Set report filter start date = end date (e.g. today only)	Only that single day's data shown; no bleed from adjacent days
18.12	**Zero-value sale prevention**	Remove all items from POS cart → Try to confirm empty sale	Confirm button disabled or validation blocks submission
18.13	**Negative discount rejection**	Enter negative number in discount field	Validation rejects negative discount; error message shown
18.14	**List pagination**	Navigate to a list with 100+ entries (e.g. items) → Use pagination	Pagination controls work; all records accessible across pages
18.15	**Mobile viewport**	Open app on mobile-sized screen (or devtools 375px viewport)	Responsive layout; no broken elements, overlapping text, or cut-off buttons

> **Test completion criteria:** All CRITICAL and HIGH scenarios must pass with zero defects before release. MEDIUM scenarios require a documented workaround or fix timeline if they fail. LOW scenarios can ship with known behavior documented in release notes.

1.1–1.8 AUTH (8)	**2.1–2.8** SUPERADMIN (8)	**3.1–3.6** BRANCHES (6)	**4.1–4.8** MASTER DATA (8)
5.1–5.8 INVENTORY (8)	**6.1–6.17** POS (17)	**7.1–7.11** CALL CENTER (11)	**8.1–8.15** BULK B2B (15)
9.1–9.10 PURCHASES (10)	**10.1–10.12** FINANCE (12)	**11.1–11.7** DELIVERY (7)	**12.1–12.7** HR (7)
